Chapmans and Travellers

ALMANACK

For the Year of *CHRIST*

1 6 9 5.

Wherein all the *Post-Roads*, with their *several*
Stations and *Distances*, the *Fairs*, and *Markets*
in *England* and *Wales*, are *Alphabetically* disposed in eve-
ry *Month*; so that the *Place where*, and the *Days on*
which any of them are *kept*, is immediately found out.

To which is added

A TABLE of ACCOUNTS
READY CAST UP, 2

For the *Buying* and *Selling* of any *Commodity*, by *Number*,
Weight, or *Measure*, from *One Farthing* to *Ten Pounds*:
and of any *Quantity*, from *One* to *Ten thousand*.

And a *Sun-Dial*, and other *Tables* and *Things*,
Useful for
all *Travellers*, *Traders*, or *Chapmen* whatsoever.

A L S O,

The *Rising* and *Setting* of the *Sun* and *Moon*,
the *Tides*, and whatsoever else is necessary for an *Annual*

A L M A N A C K.

L O N D O N . Printed by *Tho. James* for the
Company of STATIONERS 1 6 9 5.

A Brief CHRONOLOGY.

T HE Conquest of England by Duke William	621

The great Fight at Naseby, June 14. 1645.	50
King Charles was murdered, January 30.	47
The Scots routed at Dunbar, November 3.	45
The great Fight at Worcester	44
King Charles II. returned to London, May 29.	35
King Charles II. was Crowned, April 23.	34
The strong Tempestuous wind, February 18.	36
Three Blazing Stars appeared	31
The last great Plague in London	31
A great Fight between the English and the Dutch	29
The great Fire in London, September 3, 4, 5, 6.	29
The Duke of Albemarle died	25
The last great Snow 11 days	21
A great Frost continuing 10 Weeks, so that the Thames was Frozen over beyond Gravesend,	11
King Charles II. died Feb. 6,	10
King James II. and Queen Mary Crowned April 23.	10
King William III. and Queen Mary II. Proclaimed February	6

At Table shewing at what hour and minute the Moon cometh to the South, and also how long she shineth for every day of her age, & the several uses of the *same Table*.

In the Fifth Column of this *Almanack*, you have the Age of the Moon standing against every day in the Year, by help whereof and this little *Table*, you may nearly find

I. At what hour and minute the Moon will be just in the South, either evening or morning.

II. How many hours and minutes she will *shine*, either at night or next morning.

III. At what time the Moon *riseth* or *settleth*.

IV. The hour of the night, by the *Shadow* of the Moon upon any *Sun-Dial*.

I. To find at what time the Moon will be due South.

Example, Upon the 15 of *March*, the Moon being there 10 days old, I would know at what time the Moon will be upon the *Meridian* or *South*.

Look in the first Column of this Table for 10, the *Moons* Age increasing, and right against it in the second Column, you shall find 8 hours, at which time the Moon will be just *South* in the even.

II. To find how long the Moon shineth.

Example, Upon the 11 of *March*, the Moon that day being 6 days old, I would know how many hours and minutes she *shineth* that night.

Days of the Moons Age		Ho. m.		Ho. m.	
0	1	0	00	0	00
1	2	0	08	0	08
2	3	1	16	1	16
3	4	2	24	2	24
4	5	3	32	3	32
5	6	4	40	4	40
6	7	5	48	5	48
7	8	6	56	6	56
8	9	7	04	7	04
9	10	8	12	8	12
10	11	9	20	9	20
11	12	10	28	10	28
12	13	11	36	11	36
13	14	12	44	12	44
14	15	1	52	1	52
15	16	2	00	2	00

Days of the Moons Age		Ho. m.		Ho. m.	
16	17	3	08	3	08
17	18	4	16	4	16
18	19	5	24	5	24
19	20	6	32	6	32
20	21	7	40	7	40
21	22	8	48	8	48
22	23	9	56	9	56
23	24	10	04	10	04
24	25	11	12	11	12
25	26	12	20	12	20
26	27	1	28	1	28
27	28	2	36	2	36
28	29	3	44	3	44
29	30	4	52	4	52

being 6 days old, I would know how many hours and minutes she *shineth* that night.

Look for 6 (the *Moons age*) in the first Column of this Table, and right against it (in the third Column) you shall find 4 hours 48 min. and so long will the *Moon shine that Evening*, because the *Moon* increaseth.

III. To find at what time the *Moon* Riseth and Setteth.

1. If the *Moon* be increasing, that is, if she be less than 15 days old, *adde* the hours and minutes of her *shining*, to the hours and minutes of the *Suns Rising*, and the sum will be the time of the *Moons Rising*. But,

2. If the *Moon* be decreasing, that is, if she be above 15 days old, *subtract* the hours and minutes of her *shining* from the hours and minutes of the *Suns Rising*, and the remainder will be the time of the *Moons Rising*.

For the *Moons Setting*.

1. If the *Moon* be less than 15 days old, *adde* the time of her *shining* to the time of the *Suns setting*, the sum is her *setting* — But

2. If the *Moon* be above 15 days old, *subtract* her *shining* from the *Suns setting*, the remainder is her *setting*, adding or subtracting 12 hours if need be.

IV. To find the hour of the Night by the *Moons Shadow* on a Sun-Dial.

Find at what time the *Moon* comes to the South as before, which known, mark how much the Shadow upon the Dial wants of 12; which take from the time of the *Moons coming* to the South, the remainder is the hour of the Night. But if the Shadow be past 12, add those hours to the coming to the South, and the sum is the hour of the Night.

Example. Upon the 16 of April, the *Moon* being 13 days old, and comes to the South at 20 h. 24 m. and that Night find the Shadow at 9 h. 30 m. which wants 2 h. and a half of 12, wherefore take the 2 h. and 30 m. from 10 h. 24 m. and there will remain 7 h. 54 m. for the hour of the Night. But if the Shadow had been 2 h. 30 m. after 12, those added to 10 h. 24 m. would make 12 h. 54 m. for the hour of the Night.

A Table of Interest for several Sums of Money, at the rate of 6 in the Hundred, for divers Months and Days, Viz.

The Use of the SUN-DIAL.

[Or the ready finding of the hour of the Day by this *Dial*, you must provide a *Freight-Staff* or *Ruler*, which must first be divided into Ten equal parts, and then each of those into ten other smaller parts, so will the whole *Staff* or *Ruler* be divided into 100 equal parts, which may be numbered by 10, 20, 30, 40, 50, 60, 70, 80, 90, 100: And so is it fitted for Use.

Now when you would find the hour, you must erect your *Staff* or *Ruler* perpendicular, that is, set it upright upon some plain level ground, floor, or table, and note the place where the end of the shadow did fall, and with your *Staff* measure the length of the shadow in *Staves* lengths, and hundred parts of the length, according as 'tis numbered.

Example, Suppose that upon the 16 day of *January* I do erect my *Staff* perpendicular, and measuring the length of the shadow thereof, I find it to be exactly 3 times its length; wherefore, dividing the 16 day at the top of the month of *January*, I find 3, 0 to stand against the 16 day, and at the top find XII, which tells me it is then just 12 a Clock. — *Example 2*. Suppose that upon the 6 of *May* I erect my *Staff* as before, and measuring the shadow thereof, I find it to be twice the length of the *Staff*, and 24 parts more; wherefore, I look at the top of the *Dial* in *May*, for the 6 day, and casting my eye along that line, towards the right hand, I find 2, 24, to stand in that Column, at the top of which is VII, V, which tells me it is either 7 of the Clock in the morning, or 5 in the afternoon. — *Example 3*. Upon the 16 of *April*, I find the length of the shadow to be once the *Staff* length and 30 parts more: I look in *April* for the 16 day in the *Sun-Dial*, and in the line against it for 1, 30, and against it in the fifth Column I find 1, 33 (which is the nearest number nearest to 1, 30, in the Table) over which there stands IX and III, which shews that it is almost 9 in the morning, or a little after 3 in the afternoon. — *Example 4*. Upon the 26 of *June* I find the length of the shadow of the *Staff* to be once the whole length, and 20 parts; if I look for this number 1, 20, in the *Sun-Dial* against the 26 of *June*, I can find no such number, but the nearest to it less in that line is 1, 01, over which stands IX, VII, and the nearest number to it, greater, is 1, 38, over which stands VIII, IV, so that you may conclude the hour to be between 8 and 9 in the morning.

x between 3 and 4 in the afternoon. A little practice will make all this plain; For *Uſus optimus Magister*.

10000	3500	0	4000	0	4500	0	5000	50000

The Number of Pounds, Yards, or the like, to be bought or sold.

The Use of the Table of Accounts.

This Table will serve for many good purposes, but it is principally intended for the Chapmans use in Buying or Selling of any Commodity by the Yard, Ell, Pound, Hundred Gallon, &c. And its use is very easie; as by

EXAMPLE I.

At 9 d. the Yard, what will 70 yards come to?

Look for 9 d. at the head of the Table, and for 70 in the first Row or Column of the same Table, and against 70 under 9 d. you shall find 2 l. 12 s. 6 d. And so much will 70 Yards at 9 d. the Yard come to.

Also, *At 5 d. the Gallon, 500 Gallons will come to 10 l.*

And so of any other Price, or any other Number.

But if you cannot find your just Price at the head of the Table, nor your just Number on the side, you must then take it at twice, and adde them together, and the sum shall answer your Question.

EXAMPLE II.

At 7 s. the Dozen of Gloves, what will 78 dozen come to?

	l.	s.
70 Dozen at 7 s. comes to	24	10
8 Dozen at 7 s. comes to	2	16

The Sum 27 06

So that 78 Dozen at 7 s. the Dozen, come to 27 l. 6 s.

EXAMPLE III.

At 3 s. 5 d. the Ell, what will 300 Ells come to?

	l.	s.	d.
300 Ells at 3 s. comes to	45	0	0
300 Ells at 5 d. comes to	6	5	0
300 Ells at 3 q. comes to	0	18	9

The Price of 300 Ells 52 3 9

EXAMPLE IV.

At 7 d. halfpenny the Pound, what will 92 Pound come to?

	l.	s.	d.
90 Pound at 7 d. the Pound, comes to	2	12	0
2 Pound at 7 d. the Pound, comes to	0	01	0
90 Pound at a halfpenny, comes to	0	03	9
2 Pound at a halfpenny, comes to	0	00	4

The Price of 92 Pound, at 7 d. 2 q. 3 17 4
